

TOKENOMICS

This structure aims to create initial liquidity while ensuring that the majority of tokens remain in reserve for future stability and growth

Total Supply

12 million tokens (ucbi): a fixed total supply to maintain scarcity and enable controlled token appreciation over time

Token Allocation

Reserve: 51%

Current Sale Roune (IEO): 11%

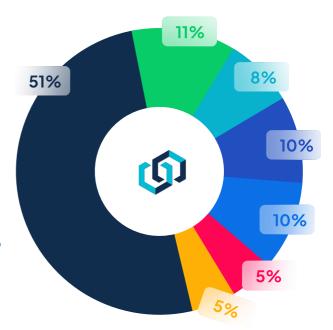

Liquidity Provistion: 8%

Team & Advisors: 10%

Development and Ecosystem Fund: 10%

Community Incentives and Staking: 5%

Strategic Partnerships: 5%

Current Sale Round (IEO): 1M - 2M tokens (8% - 16% of the total supply) will be offered in this round. This limited release aims to generate demand and liquidity while maintaining a high level of scarcity

Reserve: 51% (6.12 million tokens) retained as a reserve to support long-term stability, strategic initiatives, and future growth

Liquidity Provision: 8% allocated to liquidity on exchanges to manage trading volume and mitigate volatility

Team and Advisors: 10% allocated to the founding team and key advisors, with a vesting schedule (minimum of 3 years) to ensure alignment with long-term objectives

Development and Ecosystem Fund: 10% dedicated to ongoing development, innovation, and expansion of UCBI's use cases within the ecosystem

Community Incentives and Staking: 5% reserved for community rewards, staking programs, and user engagement to promote holding and active participation

Strategic Partnerships: 5% set aside for partnerships and strategic alliances that will further strengthen UCBI's ecosystem and expand its reach

Token Utility (Use Cases)

Medium of Exchange: UCBI tokens will serve as a currency for transactions within the UCBI ecosystem, enhancing liquidity and user engagement

Staking and Rewards: Holders can participate in staking programs, receiving rewards based on the amount and duration of tokens staked

Exclusive Service Access: Certain premium financial services within the UCBI network will be accessible only to token holders

Governance Participation: UCBI token holders can vote on important decisions regarding the development and direction of the ecosystem.

(h)

Distribution Strategy

Phased Sales Across Platforms: The IEO will list the token on multiple exchanges in stages, with a gradual release of tokens to control supply and maximize demand

Vesting for Team and Advisors: A vesting schedule will apply to the team and advisor allocations, ensuring a gradual release and reducing the risk of market impact

Gradual Release for Development and Community Incentives: Tokens allocated for development, staking, and community rewards will be released progressively, helping balance supply and demand over time

Retention And Stability Policies

Staking to Reduce Circulating Supply: Incentives for staking will encourage holders to retain tokens, reducing market supply and supporting price stability

Potential Buyback and Burn Mechanism: UCBI may employ buybacks and burns, if needed, to further control supply and support token value

Long-Term Objectives

Gradual and Sustained Growth: This controlled release strategy will drive gradual demand while preserving a majority reserve, ensuring stability and support for future rounds

Expanding Utility for Long-Term Value: The goal is to continually increase the token's real-world applications, reinforcing demand and solidifying the UCBI token's position in the market

This tokenomics plan carefully balances initial liquidity needs with a strong reserve strategy, positioning UCBI for sustainable long-term growth and stability
